

Access Delta

Integrated warehouse management software to improve accuracy, efficiency, capacity and traceability

Optimise your warehouse operations with increased capacity, visibility and traceability

200

WMS customers

including wholesalers, distributors, 3PLs, manufacturers and online retailers

25 years

experience

producing innovative, compliant warehouse management software

2,000

supply chain operators

use our range of software to increase productivity and fulfilment

Organisations who are benefiting from Access Delta

Palletways

"...it is proving an essential tool in helping us secure new business and add value to existing trading relationships."

Garry Curtis

General Manager
Palletways

AKW

"Our daily order rate is around 450-500 a day for picking. Without Access Delta, it would be difficult to manage the amount of orders being picked from two different locations."

Louise Marshall

Business Systems Manager
AKW

Condor Ferries

"Condor Ferries has automated its ship-to-shore supply chain using Access Delta technology. Since we automated our supply chain our productivity has increased by as much as 15 per cent."

Dawn Hamilton

Retail Manager
Condor Ferries

The chosen warehouse management software for 3PLs, distributors, manufacturers and bonded warehouse operators

Distributors

The logistics involved in delivering large quantities of wholesale products to customers can be quite extensive. In a fast-moving industry, speed and accuracy are paramount. We can help you react quickly to changing business dynamics with our end-to-end solution. Our warehouse management system can increase accuracy and improve the efficiency of your operations, allowing you to complete more orders with confidence and improved customer satisfaction.

Manufacturers

We understand that in your industry there's a number of elements that are key, from having the ability to trace your products from raw goods, through the production process, to the end goods that are shipped out to your customers.

Meet the demands of today's just-in-time manufacturing environment and integrate all warehouse activities with your ERP/ MRP system. Our multi-stock account architecture enables you to manage raw materials, finished goods, packaging and consignment stock at the click of a mouse.

3PLs

Multi-client operations face additional challenges within the warehouse operation when holding stock on behalf of their customers. Our warehouse management system has been developed from the ground up to support 3PL businesses, providing our customers with visibility and control for their warehouse environments. It's designed for the competitive and complex needs of multiple customers and just-in-time third party logistics. With customer by-customer inventory management, RH&D and rental charging, and online customer reporting; we have a proven track record.

Bonded warehouses

The Access Delta Bond module provides the administrative control required to operate a HMRC excise bonded warehouse.

Designed and built by people who understand excise warehousing with input from HMRC, Access Delta Bond is the new standard for bonded warehouse management systems. In use by many leading excise bonded warehouses, Access Delta Bond has a proven track record of managing both small and high volume warehouse operations throughout the UK.

Access Delta features

Goods in

A tightly controlled goods in process is the foundation of efficient warehousing. Improve accuracy and efficiency with integrated barcode or voice technology for fast, accurate data capture and advanced put-away rules. Keep your operations on track with user specific task allocation, integration with supplier ASNs, purchase and works orders and a dock bay management diary.

Goods out

Keep on top of customer SLAs and track goods leaving your warehouse with automated order management, marketplace integration and a real-time view of stock in your warehouse. Intelligent picking methods and routes speed up order fulfilment, whilst the recording of picking tasks maintains a full audit of who did what and when. Pallets can be scanned onto transport enabling full traceability of goods leaving your warehouse.

Stocktake

Save time on your annual stocktake with a real-time view of SKUs by location and status, with advanced and efficient cycle counting tasks programmed to be compliant with your needs. Keep track of all stock with our warehouse map and automatically or manually allocate stock check tasks through the graphical WMS interface. Integrated scanning technologies ensure that stock levels are kept up to date in real time.

Reporting

Forecast and plan ahead with integrated business intelligence giving you a view of market trends as well as a real-time dashboard of warehouse performance. Collate data from multiple systems or databases for a holistic view to aid with stock planning. Track performance with live updates to enable blockage alerts and quickly identify slow/fast moving stock enabling you to take the appropriate actions.

Integration and alerts

Integrate Access Delta WMS with your marketplace and host financial systems to eliminate gaps, data silos and human error. Access Delta's interface for supplier and customer systems ensures a fully connected and informed supply chain, with the ability to automate outbound ASNs and keep appropriate stakeholders informed of stock levels and locations in real-time. Exception alerts can be set up for hundreds of different triggers from different sources to keep your operations on track.

3PL

Ensure SLAs are met by following UKWA best practice for 3PLs. Storage and handling charges can be automated based on real-time data capture from all your warehouse activities, whilst ad hoc and sundry charges can also be integrated for accurate activity-based invoices. Link directly to your customer accounts for ease of inventory tracking, costing and billing. Our web portal also allows your customers to see their own stock in your warehouse and plan accordingly.

eCommerce

More companies are becoming pure online retailers and traditional wholesalers are moving into eCommerce. Marketplace system integration and intelligent order picking helps to save time and money in this high volume, low margin market. Multichannel interfaces keep all of your shopfronts and eCommerce systems updated with current stock levels. Courier integration keeps your delivery providers up to date and produces print labels compliant with all of your partners.

Track and trace

Keep track of SKUs, their status and location throughout your supply chain for a real-time view of stock. Instantly reconcile returns and stay compliant with industry standards for product recalls with Access Delta. Attributes including batch, lot and serial numbers, best before end (BBE) status; pallets and vehicles can all be tracked in real time, with reports and alerts to keep you up to date and ensure compliance.

Get the most from Access Delta

Become integrated

Access Group can offer real world integration of your back office systems, helping you to realise the power of combined finance, ERP, HR, warehousing and business intelligence software.

Configurable

Unlike some warehousing solutions, Access Delta can be configured functionally to meet your exact requirements.

Gain a clear view

Have clarity of your warehouse operations with our graphical warehouse map and integrated business intelligence dashboards.

Stay in the loop

See your business intelligence dashboards on any device, from any location, to keep track of the status of your warehouse operations.

We're there for you

When you partner with Access Group, you partner with people, not a call centre. Our software is developed, deployed and supported in the heart of the UK, where we have been based for over 25 years.

Reduce admin

Automated billing, advanced shipment notifications and other paperwork reduces the administrative burden on your staff, saving time and increasing the accuracy of your data.

Increase capacity

Through intelligent storage locations, route picking and utilising all of your storage space, you can increase the capacity and productivity of your current warehouse resources.

Goods in

Fast, accurate inbound stock processing

Real-time stock updates

Advanced put-away rules

Supplier integration

Dock bay diary

Extensive attribute recording

Key benefits

- Increase the speed and efficiency of your goods in process
- Improve the accuracy of all your operations with the correct recording of stock coming into your warehouse
- Keep track of stock due in with advanced shipment notification, purchase and works order integration
- Maintain the flow of inbound deliveries with a dock bay management diary
- Maximise the capacity in your warehouse with stock automatically allocated to all of your free space

Accurate, efficient goods in methods

Run your goods in process more effectively with Access Delta. Know which goods are due in through integration with your supplier's advanced shipment notifications, and your company's own purchase and works orders. Ensure vehicle arrivals to your site are planned effectively with a dynamic dock bay management diary.

Record all stock arriving into your warehouse with integrated barcode technology, to keep accurate records and track attributes including batch numbers, BBE dates, lot numbers and other specific attributes for instant reconciliation and effective product recalls.

Advanced put-away rules ensure items are placed in the right location; empty location suggestions enable all available space to be used with no time wasted. User specific tasks mean staff are given the most appropriate jobs based on skills and equipment.

Goods out

Automate every aspect of the outbound process

Automated order
management

SLA
tracking

Courier
integration

Intelligent pick
routes

Complete
traceability

Key benefits

- Keep customers happy and avoid fines with SLA tracking and alerts
- Streamline your delivery process with the automatic creation of courier delivery labels
- Keep your customers up-to-date with advanced shipment notifications
- Reduce labour time required to fulfil orders with intelligent picking routes
- Achieve full traceability of goods leaving your warehouse with pallets scanned onto transport vehicles

Fast, effective goods out procedures

Speed up your delivery times and increase order fulfilment with an effective, accurate and traceable goods out process. Integrate Access Delta with your marketplace systems to automatically receive orders without the need to manually re-key information, making it fast and error-free. Automate the creation and sending of advanced shipment notifications to your customers to keep everyone updated on stock movements.

Advanced task management keeps you on track to fulfil orders on time with automated order management, multi-order picking and replenishment rules and intelligent route picking all saving time on the shop floor.

Keep a record of all tasks carried out to know who has done what and when, and know your true capacity based on accurate data.

Stocktake

Gain real-time views of your stock levels

Real-time stock
updates

Extensive counting
rules

Compliant
records

Automated
reporting

Reduced
administration

Key benefits

- Save time on stocktaking with a real-time view of SKUs by location and status
- Ensure compliance with advanced cycle counting tasks programmed to be in line with your requirements
- Maintain accurate records, reduce administration time and eliminate re-keying errors with barcode scanning and data capture
- Maximise staff efficiency with interleaved, perpetual and inventory counting allowing for multiple tasks to be carried out at the same location
- Ensure that all areas of your warehouse are regularly checked with location counting tasks

Save time on stocktakes with automatic updates

Keep a clear and up-to-date view of stock levels down to intricate detail to save time on or even eliminate the need for a large annual stocktake. Enjoy an instant graphical view of stock and space available with our interactive, live warehouse map, from which you can easily interrogate information and create tasks to check or change stock locations for consolidation or segregation purposes.

Maximise employee efficiency with interleaved perpetual and inventory counting allowing them to carry out multiple tasks at locations, increasing your productivity without the need for extra resource.

Ensure compliance with specific industry and customer requirements with the creation of tailored counting tasks and rules within Access Delta.

Management information

Full insight into your warehouse, business and market performance

Real-time
reporting

Full KPI
tracking

Exception
alerts

Intuitive
Dashboards

Multiple system
integration

Key benefits

- Make informed, timely decisions with a clear view of market trends as well as your internal stock and performance levels
- Maintain an accurate picture of your warehouse operations with automated productivity, stock level and status reports
- Keep all stakeholders informed with easy to understand dashboards updated in real time from internal and external sources of information
- Stay informed of seasonal or event related spikes with advanced business intelligence software integration
- Ensure your warehouse runs smoothly with live activity monitoring and blockage alerts to keep your tasks on track

Integrate multiple data sources for deep analysis and informed planning

Our warehouse management software combined with our reporting and analytics module gives you a holistic view of warehouse performance, your business as a whole and market trends to help you to review and plan your operations.

See the profitability of each stock line in your warehouse with a real-time view of fulfilled orders and those in progress, and keep track of wastage with expiry dates actively monitored and alerted. Keep track of staff productivity with actions also recorded for a full audit trail.

Integrate internal and external sources of information for insightful business and market performance dashboards to aid your decision-making and stock planning.

Integration and alerts

Accurate, actionable information across your business and beyond

Real time
updates

Eliminate data
gaps

Reduce
Administration

Fully connected
systems

Increased
visibility

Key benefits

- Eliminate gaps, data silos and human error with seamlessly integrated software ensuring the flow of up-to-date information throughout your business
- Keep supply chain partners and customers informed through integration with supplier, customer and marketplace systems
- Improve working relationships with couriers through system integration and automated courier label creation
- Reduce administration with despatch notifications automatically emailed to clients
- Take timely corrective actions with hundreds of exception alert triggers to keep you on track

Integrate with your existing systems to keep all records up to date

Access Delta integrates with your host financial and marketplace systems to keep your records up to date, accurate and consistent at all times. Our warehouse management software can integrate with Access Dimensions financial software, or with your existing Sage, Microsoft GP, AX, NAV or SAP ERP solutions.

Keep your online shopfronts including Amazon and eBay up to date in real time with your stock levels through integration with eCommerce systems such as Magento.

Connect your Access Delta solution to supplier and customer systems to achieve a fully informed, collaborative and proactive supply chain, with visibility of stock levels, order levels and shipment notifications from source to sale for all relevant stakeholders.

3PL features

Increase customer satisfaction following UKWA best practice

SLA
tracking

Automated
billing

Chargeable activity
records

Multiple
account logic

Customer web
portal

Key benefits

- Increase revenue through accurate charging for warehouse activities
- Reduce administration with automated invoicing based on shop floor data capture
- Increase customer satisfaction by giving them a clear view of stock through Access Delta's live web portal
- Easily track inventory, costs and customer billing with links to your customer accounts
- Stay compliant with customer demands through SLA tracking and alerts

Manage your space effectively for multiple customers

Over 100 3PL providers use Access Delta to ensure SLAs are met and customer satisfaction is maintained through ease of use and by following UKWA best practice. Access work closely with the UKWA to keep up to date with the latest best practices and to ensure that Access Delta follows the correct procedures for your warehouse.

Increase revenue through data capture on all of your warehouse activities and the automation of accurate charges and billing for these. Give your customers a view of all of their stock in your warehouse through Access Delta's customer web portal, keeping them up to date and allowing them to plan accordingly. The multi-account logic built into our software allows the creation of specific, easily identifiable paperwork in all of your customers' required formats and branding.

eCommerce

Operate effectively in this fast-moving marketplace

Marketplace system
integration

Intelligent bulk
picking

Traceable
deliveries

Efficient returns
process

Stock level
alerts

Key benefits

- Maintain your profit margins with efficient route picking on high volumes of orders
- Increase revenue and reduce wastage through the identification of fast/slow moving SKUs enabling you to organise stock effectively and buy more efficiently
- Keep customers happy with up-to-date stock levels on multiple online shopfronts ensuring that you can fulfil orders
- See which stock is packed onto pallets and boxes with box manifest records and labelling
- Stay on the ball and fulfil more orders with buffer stock level alerts

Maintain margins with efficient operations and an effective returns process

Keep multiple online shopfronts up to date, send out a high volume of small orders on time and handle returns effectively to maintain your margins in this high volume, low margin marketplace.

Access Delta's features are primed to help wholesale companies to move into the eCommerce space, with the software linking to online marketplace systems. Keep multiple shopfronts up to date in real time and set up intelligent pick, pack and return rules to increase efficiency on your shop floor. Integrate with courier systems and automatically print compliant delivery labels.

Organise bulk picking intelligently to gain the greatest productivity from your pickers using voice or barcode scanning technologies, as well as the option for automated tote picking for fast, reliable picking of many small orders at once.

Track and trace

Full audit trails for a better run warehouse

SKU location
tracking

Real-time
view

Stock attribute
monitoring

Batch
traceability

Full audit
trail

Key benefits

- Plan accurately knowing the status, productivity and capacity of in-house resources with tracking and reporting of all assets and staff
- Know the location of all stock in your warehouse, presented visually through a graphical warehouse map
- Handle product recalls efficiently, keeping in depth records of outbound stock with a full audit trail from receipt to delivery
- Increase revenue by handling returns effectively, putting re-saleable stock into separate locations from defective or quarantined returns
- Access Delta's compliance with British Retail Consortium global food and pharmaceutical standards means you stay compliant too

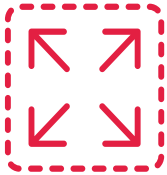

Keep track of stock, attributes, outbound deliveries and returns

Maintain a clear view of stock by location, status and other attributes from receipt to delivery throughout your supply chain. Stay compliant with industry standards for product recalls with a full audit trail and instant reconciliation of returns.

Keep on top of your in-house resources with live productivity reporting and tracking for staff and equipment.

Multiple attributes can be recorded and monitored by Access Delta. These include batch, lot and serial numbers and best before end status, which can be tracked by individual SKU, or by pallet and vehicle through barcode scanning.

Access Delta records returned items by quality class, allowing you to separate damaged or quarantined goods from those ready for re-sale for the fastest possible turnaround times and reduced wastage in this fast-moving consumer market.
