

Access UBS POS

August 2025 Release Note

About these Release Notes

Welcome to the Access UBS POS Release Notes!

This document provides all essential information about the current software version. It includes a summary of the changes made, and you can navigate through the document easily using the hyperlinks to access detailed information about the new features, including relevant screenshots and videos where applicable.

Please refer to the table of contents for a full list of what is included.

About Access UBS POS

Access UBS POS is a point-of-sale cash register for retail sales, services, and rental businesses. This system can operate with or without barcode scanning equipment. Product codes can be manually entered or scanned during a transaction, instantly displaying the item's quantity, price, and description on the screen for quick and accurate processing.

Integration is allowed between Access UBS POS and Access UBS Accounting & Billing.

Release Summary

Access UBS POS v2025.1 PU1

Important Note :

- You need to disable your antivirus before you install the new update, as some anti-viruses can interfere and prevent a successful installation.
- After successfully installing the update (whether via Online Update or using the Installer), you must restart your computer for the configuration changes to take effect.

The major features included in this release are listed below. For more information about each feature, please click the corresponding links. Features are grouped by Product/Area to help you quickly find the details most relevant to your needs.

Malaysia eInvoicing

eInvoicing Console

We are excited to launch the new e-Invoicing feature in the UBS POS system, designed to streamline your invoicing process with automation, real-time tracking, and seamless integration into your existing workflow.

This enhancement offers:

- Simplified invoice creation
- Regulatory compliance
- Enhanced security for your financial data

To get started, access the e-Invoicing module, configure your settings, and begin generating and managing e-invoices more efficiently and accurately.

General

Digital Assistant

We've moved the Digital Assistant to a more visible spot in the app, so you can get help faster and more easily. All the same great features—now just easier to access!

[Read more about this feature](#)

Issue Resolution

We have addressed key concerns to enhance user experience, ensuring stability, reliability, and efficiency. Our focus on resolving bugs aims to boost customer satisfaction, foster trust, and establish a solid foundation for future development and updates.

Release Contents

The following section provides detailed descriptions of features, including screenshots and videos where applicable. This is organized based on the products and modules identified in the Release Summary section.

Malaysia eInvoicing

eInvoicing Console

The **e-Invoicing menu** is now conveniently available on the **left panel** of your working screen. Click to expand it and explore a full suite of functionalities designed to support every phase of your e-Invoicing workflow—from configuration and invoice creation to submission and tracking

Function	Functional Objective
Outgoing Dashboard	To View, Approve, Disapprove and Transmit documents
Configurations	Maintain additional values required for e-Invoicing in Company, Customers, Suppliers and Items/Services
Mapping	Realigning current values to comply with data standardization, integration, and compliance for e-invoice

For more details on how the eInvoicing console works, please refer to the [eInvoicing guide](#).

Important Note: If the option "Integrated with Inventory & Billing" in Settings is enabled, you should access the eInvoicing console from the Billing module, as that will serve as your source of data.

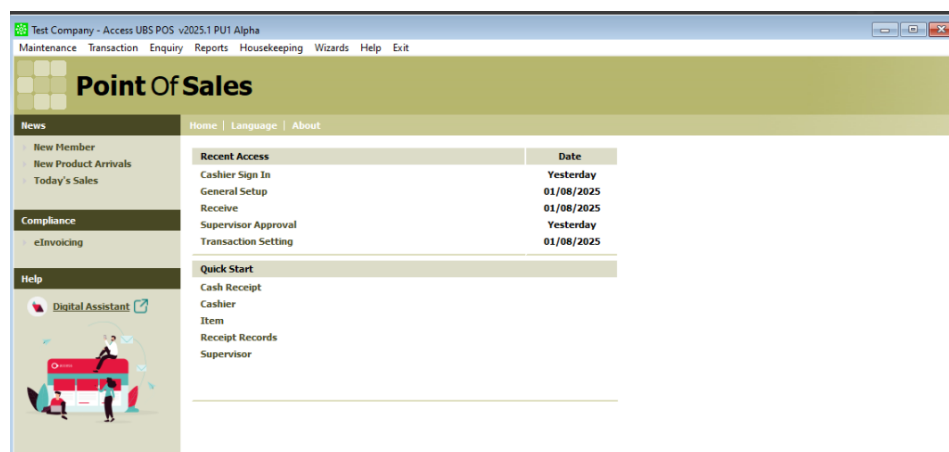

General

Digital Assistant

We've relocated the Digital Assistant to a more visible position within the application, making it quicker and easier for you to find support when you need it. Now you can:

- Find help faster without searching
- Get instant answers with less effort
- Stay focused with minimal disruption

Same helpful assistant—now just easier to reach.

Issue Resolutions

Here is the summary of the concerns that haven addressed:

- Fixed an issue where error prompts, "Object is not contained in a FORMSET." & Variable Elmported is not found, when user voids receipt.
