

**Released June 2026.**

## **New Features**

### **Prefill – 2026 Individual Tax Return**

Prefill for the 2026 Individual Tax Return (IITR) is now available in Access Tax, allowing practitioners to import ATO-supplied data directly into 2026 returns for the tax season.

## **Changes Deployed**

### **Improved Client Search Performance for Large Practice Networks**

Client List/Search has been optimised to significantly improve search speed for practitioners managing large practice networks. Previously, searches for these users could take several seconds due to an inefficient lookup against the full client database.

As part of this change, search behaviour has also been refined:

- Name, Reference, Business Name, and Phone searches now match from the **start** of the field, rather than matching anywhere within it
- TFN and ABN searches now require the **full, exact number**, rather than matching on a partial number
- **Faster results for large networks:** Practitioners with extensive client lists across multiple practices will see noticeably quicker search response times
- **More precise matching:** Exact TFN/ABN matching reduces the chance of unintended partial matches when searching sensitive identifiers
