

Released Jul 2025.

Minor Defects

- Fixed an issue where tax form statuses appeared in random order in the dropdown menu within tax forms, despite being properly ordered in the practice settings. The dropdown now respects the same ordering as configured in the Statuses tab.
- Fixed incorrect "Invalid Date" error displayed for prefilled Employment Termination Payment details in 2025 tax returns.
- Updated SAPTO (Seniors and Pensioners Tax Offset) Warning calculations to use the correct 2025 income thresholds instead of 2024 thresholds.
- Updated International Dealing Schedule activity codes to align with ATO website numbering standards, including restoration of the "Other - 99" option that was missing from the 2025 tax year.
- Fixed validation error cmn.ato.ptr.431047 for 2016 Partnership Tax Return by updating to the ATO's revised validation rules. Zero values are now recognised as valid where required.

Security

- Continuous security & performance updates have been applied.
